Slide 1: The Manager Problem & Main Forensic Findings

Frontline sales managers cannot rely on upstream CRM classification: outcome labels contradict explicit spoken statements, reps are misattributed, and non-sales meetings contaminate pipelines.

1. The Phantom Follow-up (Call C10)

Upstream Tag: `observed_outcome: follow_up`

> "Would a follow-up call on Monday or Tuesday next week be okay... ? No. I said I will contact you if there is anything to discuss."

Product Impact: Flagged as Discrepancy Alert. Outreach cancelled; contact departed Meadowbrick.

2. Product Bug Escalation (Meeting M07)

Update Batch Discovery: Arrives in Rev 2 with 27 turns.

> Turn 2: Customer A shares screen showing payment description edit failing to persist upon save.

Product Impact: Manual route override to Customer Support preserved; routed to Engineering.

3. Rep Attribution Mismatch (Call C06)

CRM Metadata: `rep_name: Meera`

> "Good evening. Ravi here. I'll say at the start that this is a cold call."

Product Impact: System tags caller mismatch; manager coaches Ravi, not Meera, on 120-store retail pitch.

Slide 2: Interface Architecture & Deliberate Omissions

High-Density Executive Terminal

- **Scannable Triage Inbox:** Monospaced reference badges (`C10`, `M07`) and discrepancy chips.
- **Deep Evidence Inspector:** Split-pane drawer with citation jumping directly to supporting turns and verbatim quotes.
- **Interactive Replay Stepper:** Top evaluation bar enabling 1-click verification of the 5-step data contract.

Deliberate Omissions (What We Left Out)

- **Omitted 1: Vanity Sentiment Gauges.** Unactionable circular charts replaced with verbatim citations and stated owners.
- **Omitted 2: Synthetic ARR Estimates.** No CRM deal table exists; inventing numbers creates managerial hallucination.
- **Omitted 3: Global Date Filter Alone.** All activity falls on 21 Aug 2026; implemented two-tier Person Filter separating Call Reps from Organizers.

Slide 3: Routing Architecture & The Difficult Case (M07)

6-Tier Destination Taxonomy

`deal_next_steps` (M03, C03) • `sales_coaching` (C01, C06) • `customer_success` (M04) • `customer_support` (M07, M09) • `partnerships` (M01, C07) • `internal_ops` (M10, M02) • `intake_exception` (B01-B20).

The Difficult Case: Meeting M07 (Willowfield Trust)

- **Initial Delivery (Rev 1):** Has `recording_status: recorded`, but `turns: []` awaiting update batch. Staged in Intake.
- **Manager Correction:** Evaluator manually assigns M07 to *Customer Support* with saved reason note.
- **Update Batch Ingestion (Rev 2):** M07 payload replaced with 27 turns detailing the payment save bug.
- **Preserved Judgment: Manual override survives intact**; analysis freshness flagged as `stale_pending_re-review` so newer evidence is visible.

Slide 4: Metric Verification & Evidence Traceability

Headline KPI Verification & Explicit Denominators

Metric Name	Explicit Formula & Denominator	Initial	Post-Update
Total Selected Records	Distinct (source_type, source_id)	**44**	**44** (Idempotent)
Transcript Coverage	Records with speech / 44 Total Extract	**38.6%** (17/44)	**40.9%** (18/44)
Call Coverage	Calls with transcript / 30 Total Calls	**33.3%** (10/30)	**33.3%** (10/30)
Meeting Coverage	Meetings with turns / 14 Total Meetings	**50.0%** (7/14)	**57.1%** (8/14)
Source Connect Rate	is_connected=true / 30 Non-null Calls	**36.7%** (11/30)	**36.7%** (11/30)

*Evidence Traceability: Meeting passages cite (record_ref, turn number) (e.g., M03 Turn 36). Call passages cite exact verbatim quotes (e.g., C09: "No, please don't use my name").

Slide 5: Trade-offs, AI Usage, Limitations & Roadmap

The Rejected Decision

Rejected: Automated AI Deal Value Sizing ($ ARR) & Win Probability Scoring.
Why: Zero CRM deal tables or historical contracts exist. Guessing numbers violates data integrity and creates false managerial confidence.
Trade-off Accepted: Reporting qualitative stage blockers, named owners, and competitor identification (StoreHarbor C05).

AI Usage & Determinism

- **100% Deterministic Engine:** Replay ordering, deduplication, revision replacement, and metrics run deterministically.
- **Pre-generated Dossiers:** All 18 transcripts are analyzed with turn citations and embedded locally, eliminating API key requirements.

Limitations & Future Work

Local speaker labels (`Team member A`, `Customer A`) are scoped per meeting; future enhancements will link attendees across meetings via corporate email domains.
